1. A method for managing bookmark information in a data structure residing on a computer, comprising:
- receiving the bookmark information from a plurality of sources networked to the computer, the bookmark information comprising source identifier information and network addresses; and
- storing the bookmark information in the data structure.
2. The method of claim 1, further comprising collecting the network addresses and source identifier information during an Internet browsing session.
3. The method of claim 1, wherein the plurality of sources includes a local computer.
4. The method of claim 1, wherein the plurality of sources is selected from the group comprising of a laptop, a cellular phone, e-mail, a personal data assistant, a set-top box, a watch, a hand-held computer, a pager, and a desktop computer.
5. The method of claim 1, wherein the data structure is a bookmark table having at least one bookmark entry.
6. The method of claim 5, further comprising storing the bookmark table on a client computer.
7. The method of claim 1, wherein the data structure is stored in memory of the computer and is readable by a processor.
8. The method of claim 2, further comprising populating a plurality of fields with the bookmark information to form the at least one bookmark entry.
9. The method of claim 2, further comprising collecting the bookmark information as at least one bookmark entry in a bookmark table.

1 10. The method of claim 2, further comprising, prior to receiving the bookmark  
2 information, sending the bookmark information from at least one of the plurality of  
3 sources to the computer in an instance where a bookmark was generated at the at least  
4 one of the plurality of sources.

5  
6 11. The method of claim 2, further comprising, prior to receiving the bookmark  
7 information:

8 collecting the network addresses by one or more of the plurality of sources;

9 storing the network addresses as bookmarks;

10 sending the bookmark information to the computer.

11  
12 12. The method of claim 2, further comprising, prior to receiving the bookmark  
13 information:

14 browsing a network connected to the plurality of sources and comprising the  
15 network addresses;

16 collecting the network addresses by one or more of the plurality of sources;

17 storing the network addresses as bookmarks;

18 sending the bookmark information to the computer.

19  
20 13. The method of claim 12, wherein the network is the Internet and the network  
21 addresses are Uniform Resource Locators (URLs).

22  
23 14. The method of claim 10, wherein the plurality of sources is selected from the group  
24 comprising of a laptop, a cellular phone, e-mail, a personal data assistant, a set-top box,  
25 a watch, a hand-held computer, a pager, and a desktop computer.

26  
27 15. The method of claim 1, wherein the source identifier information is selected from the  
28 group comprising of the laptop, the cellular phone, e-mail, the personal data assistant,  
29 the set-top box, the watch, the hand-held computer, a pager, and a desktop computer.

30  
31 16. The method of claim 2, wherein the source identifier information is selected from the  
32 group comprising of person, location, sender, channel, program, and phone number.

1 17. The method of claim 1, wherein the bookmark information received from the  
2 plurality of sources may be administered at a local computer based on the source  
3 identifier information.

4  
5 18. A computer-readable medium having instructions or programs which, when executed  
6 by a process cause the process to perform a method, comprising:

7 receiving the bookmark information from a plurality of sources networked to the  
8 computer, the bookmark information comprising source identifier information and  
9 network addresses; and

10 storing the bookmark information in a data structure.

11  
12 19. The computer-readable medium of claim 18, further comprising collecting the  
13 network addresses and source identifier information during an Internet browsing session.

14  
15 20. The computer-readable media of claim 18, wherein the plurality of sources includes  
16 a local computer.

17  
18 21. The computer-readable medium of claim 18, wherein the plurality of sources is  
19 selected from the group comprising of a laptop, a cellular phone, e-mail, a personal data  
20 assistant, a set-top box, a watch, a hand-held computer, a pager, and a desktop computer.

21  
22 22. The computer-readable medium of claim 18, wherein the data structure is a  
23 bookmark table having at least one bookmark entry.

24  
25 23. The computer-readable medium of claim 22, further comprising storing the  
26 bookmark table on a client computer.

27  
28 24. The computer-readable medium of claim 18, wherein the data structure is stored in  
29 memory of the computer and is readable by a processor.

B1

1 25. The computer-readable medium of claim 19, further comprising populating a  
2 plurality of fields with the bookmark information to form the at least one bookmark  
3 entry.

4  
5 26. The computer-readable medium of claim 19, further comprising collecting the  
6 bookmark information as at least one bookmark entry in a bookmark table.

7  
8 27. The computer-readable medium of claim 19, further comprising, prior to receiving  
9 the bookmark information, sending the bookmark information from at least one of the  
10 plurality of sources to the computer in an instance where a bookmark was generated at  
11 the at least one of the plurality of sources.

12  
13 28. The computer-readable medium of claim 19, further comprising, prior to receiving  
14 the bookmark information:

15 collecting the network addresses by one or more of the plurality of sources;  
16 storing the network addresses as bookmarks;  
17 sending the bookmark information to the computer.

18  
19 29. The computer-readable medium of claim 19, further comprising, prior to receiving  
20 the bookmark information:

21 browsing, a network connected to the plurality of sources and comprising  
22 network addresses identified by the network addresses;  
23 collecting the network addresses by one or more of the plurality of sources;  
24 storing the network addresses as bookmarks;  
25 sending the bookmark information to the computer.

26  
27 30. The computer-readable medium of claim 29, wherein the network is the Internet and  
28 the network addresses are URLs.

29  
30 31. The computer-readable medium of claim 27, wherein the plurality of sources is  
31 selected from the group comprising of a laptop, a cellular phone, e-mail, a personal data  
32 assistant, a set-top box, a watch, a hand-held computer, a pager, and a desktop computer.

1  
2 32. The computer-readable medium of claim 18 wherein the source identifier  
3 information is selected from the group comprising of a laptop, a cellular phone, e-mail, a  
4 personal data assistant, a set-top box, a watch, a hand-held computer, a pager, and a  
5 desktop computer.

6  
7 33. The computer-readable medium of claim 19, wherein the source identifier  
8 information is selected from the group comprising of person, location, sender, channel,  
9 program, and phone number.

10  
11 34. The computer-readable medium of claim 18, wherein the bookmark information  
12 received from the plurality of sources may be administered at a local computer based on  
13 the source identifier information.

14  
15 35. An apparatus, comprising:

16 a computer;

17 at least one bookmarking device having a unique source identifier associated  
18 therewith and containing a first browser adapted to process network addresses; and

19 a network connection connecting the computer to the at least one bookmarking  
20 device and comprising network addresses, wherein the at least one bookmarking device  
21 transfers the network addresses and unique source identifiers to the computer via the  
22 network connection.

23  
24 36. The apparatus of claim 35, wherein the network connection comprises the Internet.

25  
26 37. The apparatus of claim 35, wherein the network connection comprises a wireless  
27 connection.

28  
29 38. The apparatus of claim 35 wherein the source identifiers are selected from the group  
30 comprising of a laptop, a cellular phone, e-mail, a personal data assistant, a set-top box,  
31 a watch, a hand-held computer, a pager, and a desktop computer.

1 39. The apparatus of claim 35, wherein the computer comprises a data structure for  
2 storing the network addresses and unique source identifiers.

3  
4 40. The apparatus of claim 39, wherein the data structure is a bookmark table having at  
5 least one bookmark entry.

6  
7 41. The apparatus of claim 39, wherein the data structure is stored in memory of the  
8 computer and is readable by a processor.

9  
10 42. The apparatus of claim 40, wherein the computer further comprises a second browser  
11 for managing the data structure.
